EDITORIAL COMMENT

The UNIZIK Journal of STM Education publishes reports on empirical research in Science, Technology, Engineering and Mathematics (STEM) Education as well as on related studies in education generally. The publication is a medium of communicating well researched works for the science community, serving as a forum for communication and cooperation among STEM teachers and students, policy makers, educators and other educational practitioners across the globe. This present Volume 8 Issue 2 contains sixteen (16) well researched articles that have passed through peer-review by professionals. The opinions expressed are not necessarily those of the editorial board but of individual authors. These papers are very informative, educative and instructive and I therefore invite readers to enjoy reading the contributions. The editorial board of UNIZIK Journal of STM Education appreciates those who subscribed to the journal, reviewers and consulting editors for their contributions.
